WAVEHOME

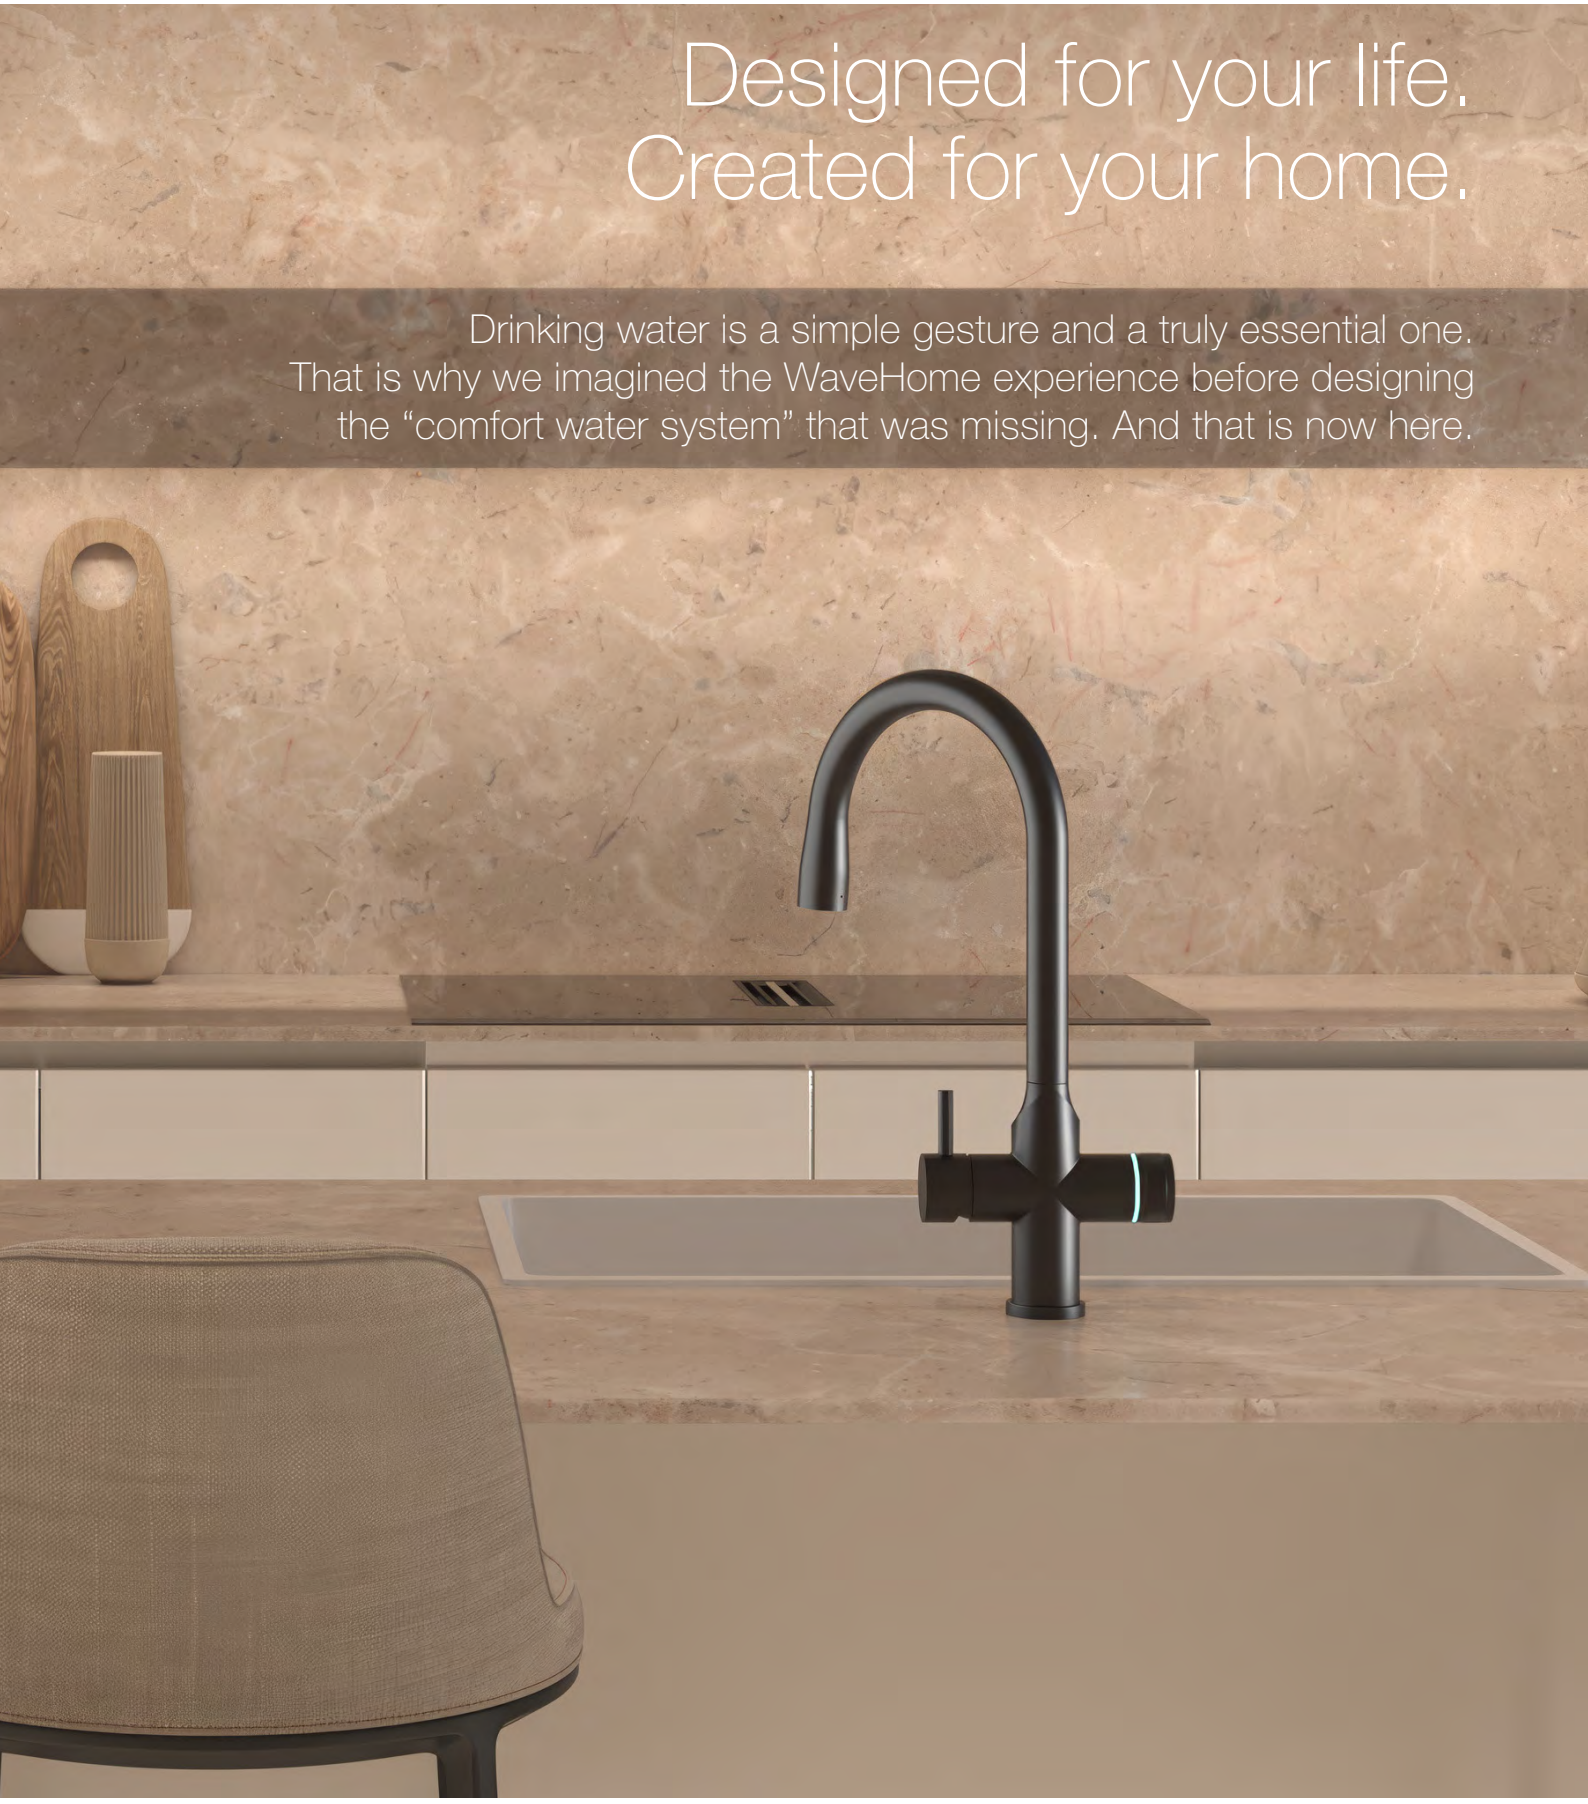

blupure

KINFOLK
CEREAL

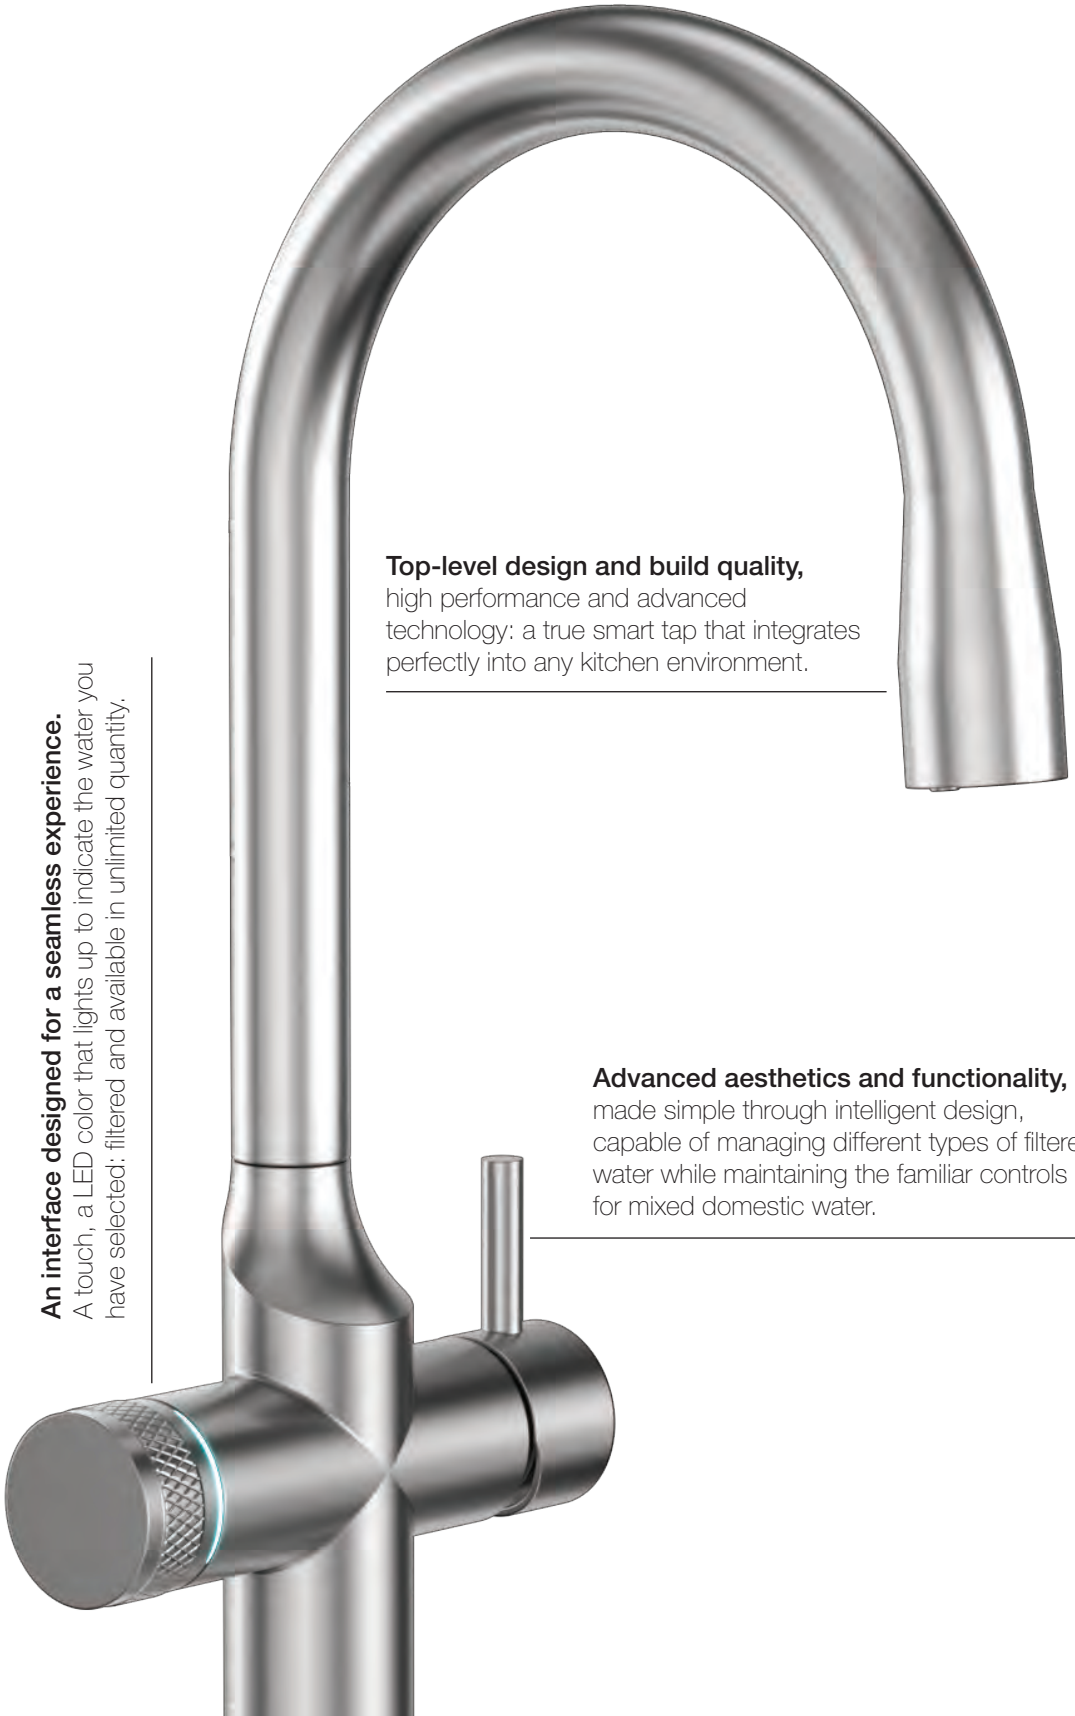

Designed for your life.
Created for your home.

Drinking water is a simple gesture and a truly essential one.
That is why we imagined the WaveHome experience before designing
the “comfort water system” that was missing. And that is now here.

WaveHome

It may look like only a beautiful tap. But it is much more.

Top-level design and build quality, high performance and advanced technology: a true smart tap that integrates perfectly into any kitchen environment.

Advanced aesthetics and functionality, made simple through intelligent design, capable of managing different types of filtered water while maintaining the familiar controls for mixed domestic water.

An interface designed for a seamless experience. A touch, a LED color that lights up to indicate the water you have selected: filtered and available in unlimited quantity.

Why?

To always have your drinking water available, convenient and exactly the way you like it: good, filtered, chilled, with plenty of bubbles or just a few. All directly from the tap in your home. Convenient, isn't it?

WaveHome

High-quality filtered water.

Drinking a glass of pure, great-tasting water.
It is hard to imagine a more common and essential gesture for our life and well-being. That is why we wanted to make it truly simple, and even safer.
Simple, because you can instantly select your preferred water and, with a touch, fill glasses, bottles, carafes or reusable bottles.
Safe, because thanks to BLUTRON's advanced filtration technology, developed by Blupura and integrated into WaveHome, every glass of water can be free from impurities and unwanted odours, healthy and pleasant to drink.
That is what we mean by a "comfort water system."

BLUTRON

Inside the undercounter cooler, Blutron Micro 7K can be integrated to reduce chlorine, organic compounds and possible unwanted odours or tastes. For an advanced level of ultrafiltration, Blutron Hero 10K is available as an alternative, also contributing to the reduction of PFAS, heavy metals and microplastics.

Your personal water source. With separate dispensing paths.

An important design feature conceived to ensure optimal water flows and the highest level of hygiene.

The finest stainless steel, in three finishes: chrome, satin and matte black. Because every kitchen has its own taste.

The WaveHome tap complies with the health safety requirements set out by DM174 for the protection of public health and is entirely made of AISI 304 stainless steel, resistant to corrosion and characterized by high hygienic properties. These features make it a preferred choice for professional kitchen equipment in the food industry.

Choosing water comfort pays off. For you and for the environment.

Having pure, great-tasting water flowing directly from the tap in your home offers clear practical advantages, going beyond the simple act of staying hydrated.
For example, you no longer need to buy and carry bottled water home, freeing up storage space and making room in your refrigerator.
Beyond logistical and economic savings, taking a broader view, installing a system like WaveHome also means making a choice for the future, reducing plastic pollution, as well as the environmental impact associated with producing and transporting bottles you will no longer need to buy.
A responsible choice, and a conscious one, for the ecosystem we all share.

“Less Plastic is cool!”
Plastic bottles have such a negative impact on the ecosystem that they contribute to ongoing climate change. In addition to being among the main causes of plastic pollution in oceans and across the planet, their production alone requires 665 thousand tonnes of oil and generates approximately 910 thousand tonnes of CO_2 equivalent greenhouse gas emissions.
For one litre of water in a plastic bottle, up to 250 g of CO_2 can be generated - up to 6,000 times more than drinking water from the tap. (Data on an annual basis.)

Natural Gas
Blupura has been a pioneer in the sector and has exclusively used natural refrigerant gases since its foundation, a sustainable choice with zero impact on global warming potential, while also offering the advantage of quieter compressor operation.

Designed dimensions

WaveHome's cooling, filtration and carbonation unit measures 216 mm in width, 441 mm in height and 495 mm in depth. A perfectly sized solution, designed to fit the under-sink space of virtually any kitchen cabinet.

WaveHome

Portion Control: convenience without wasting a drop.

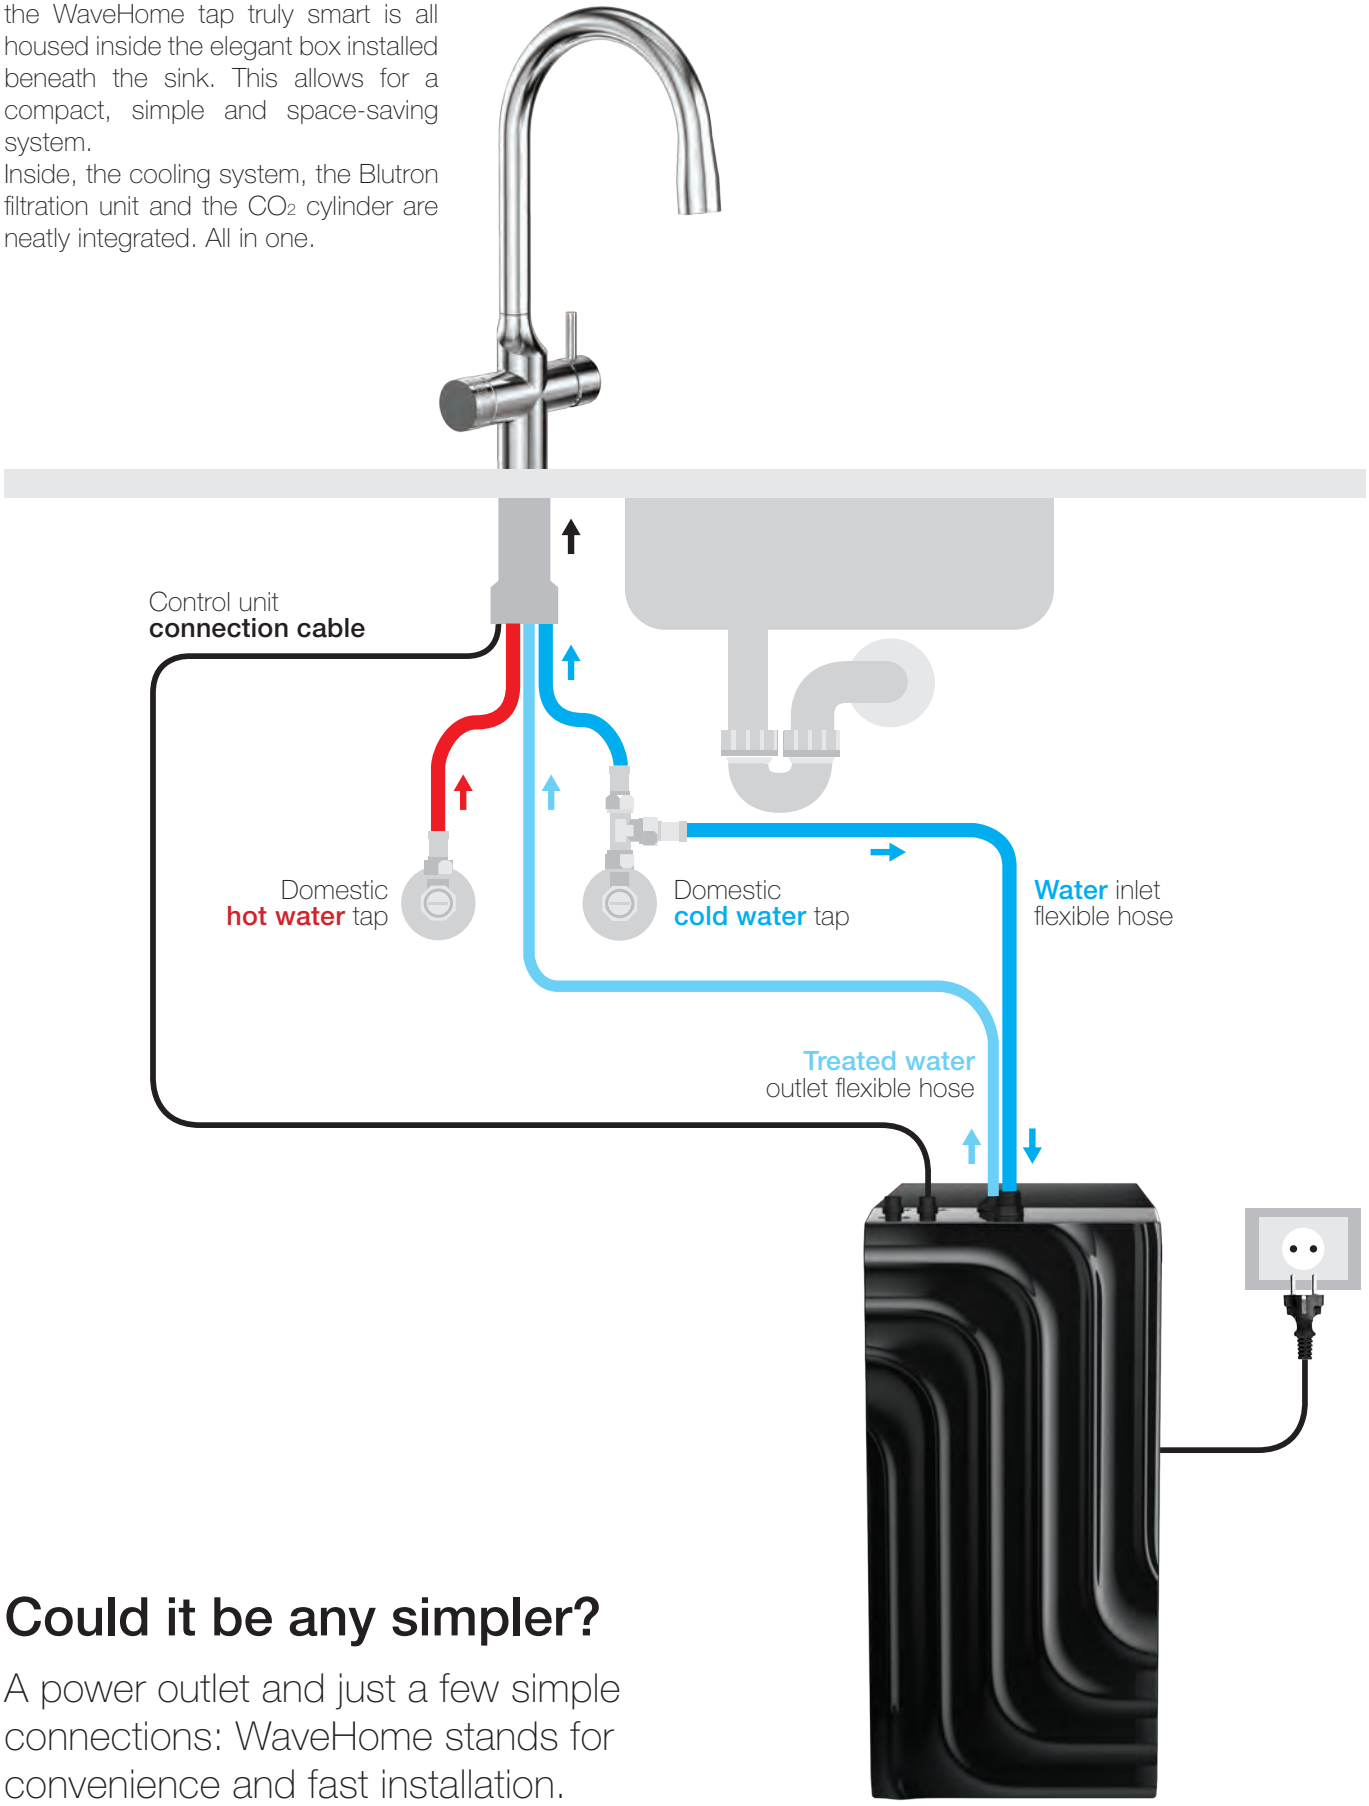

WaveHome gives you the possibility to choose exactly how much drinking water will be dispensed. With a double touch, you can fill your bottle, carafe or reusable bottle precisely, without worrying about monitoring the flow or turning off the tap. Maximum convenience, no waste.

WaveHome

What's underneath…

The advanced technology that makes the WaveHome tap truly smart is all housed inside the elegant box installed beneath the sink. This allows for a compact, simple and space-saving system.
Inside, the cooling system, the Blutron filtration unit and the CO_2 cylinder are neatly integrated. All in one.

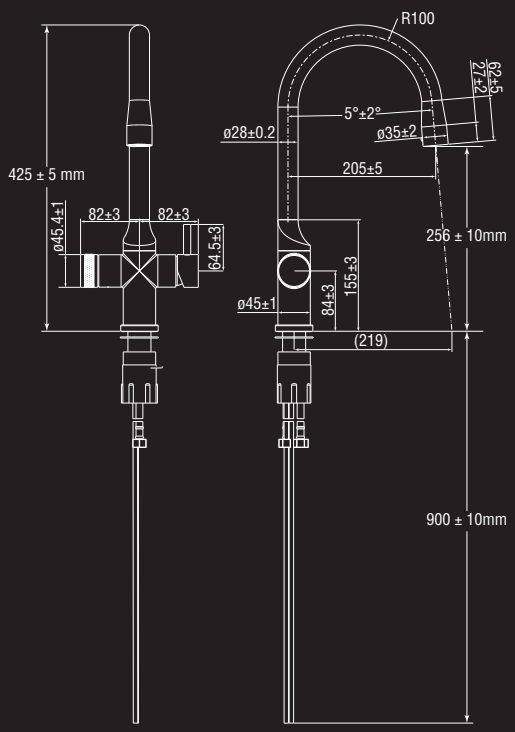

Could it be any simpler?

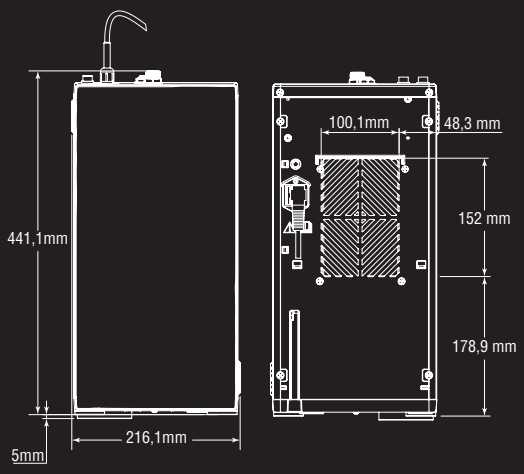

A power outlet and just a few simple connections: WaveHome stands for convenience and fast installation.

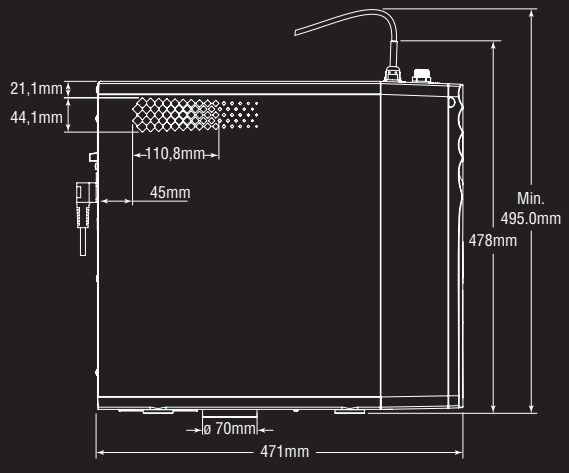

Top-level accessibility.

We designed WaveHome to offer you the best user experience every day. But we did not stop there. Even routine operations such as replacing the CO_2 cylinder and the filtration cartridge are extremely easy. Everything is within easy reach.
